

If you want to replace your high school chemistry text with a free, online resource, this post is for you. The list below contains 37 (yes, I said 37!) of the best websites to learn something new. It seems like there is no end of knowledge available for those who are willing to look and try! I hope that some of these sites will really help you with your school work and life in general; we've included everything from vocabulary builders and algebra tutorials to drawing and engineering lessons. Some of these websites have a free version, but often include ads. In the case where you must pay for a subscription to access the full site, we've noted that as well. Although some of these sites may look intimidating at first glance, they are all very user-friendly. Most of them have been designed with student learning in mind, and have been reviewed/rated by both students and teachers. To make your search for new and interesting websites easier (and more fun), we've separated this post into four categories:

Admit it — you probably don't like to read textbooks! But we'd all rather read online than watch a boring video or listen to someone drone on with slides. So, without further ado, here are the best websites to learn something new (and free!) that you can read.

This link is to an interactive diagram that you can manipulate. Move the pieces around and see how the animal changes shape! Try other animals as well.

This site is full of games and puzzles for students to do online. Poke around for all sorts of interesting things to learn about math, science, geography, history and other subjects! You can also sign up for free email lessons or play around with other cool interactive learning games on this site.

This link will take you directly to The Periodic Table . It has tons of information about all kinds of elements, including their history and origin. It has hand-drawn images of elements as well.

This site offers excellent images, diagrams, images and videos to learn more about the Periodic Table.

This is an interactive image that shows how metals are arranged in the periodic table. You can zoom in and out for more detail. It also offers an audio quiz to test your knowledge of organic chemistry (which is cool, by the way).

This link will take you directly to The Periodic Table . It has tons of information about all kinds of elements, including their history and origin. It has hand-drawn images of elements as well.

Here is an online version of the periodic table. It also contains additional information about the elements themselves, with links to all sorts of cool chemistry sites.

This is the link for "Chemistry for Changing Times." You can learn more about what chemistry is, how it pertains to everyday life and how it's practiced in the real world. There are also quizzes and games on this site.

This link takes you directly to The Periodic Table . It has tons of information about all kinds of elements, including their history and origin. It has hand-drawn images of elements as well.
